

小島 **BIRD FREE**

Protecting the  
urban environment

Report on application of 小島 *Bird Free*  
to the east side of Preston's Road flyover, 21 July 2015

Pigeons had been nesting at the back of the bearing shelf in the corners (above left). The entire bearing shelf was covered in faeces.

The upper flanges of the cross members (above left) were favoured night roosts. This was evident from the accumulation of faeces on the flanges below (above right).

The corners of the bearing shelf, from which nests were removed, were treated with dishes of 小島 *Bird Free* fixed to tiles (above left). To prevent pigeons from nesting behind the bearings, dishes of 小島 *Bird Free* were applied as shown above right.

After removal of all faeces, the remainder of the bearing shelf was treated with dishes of 小島 *Bird Free* as shown above.

Both the ledge in front of the bearing shelf, and the gutter between that ledge and the bearing shelf were treated as shown above.

The upper flanges of the cross members were treated with 小島 *Bird Free* to prevent roosting (above left). As the pigeons especially favoured the corners of these flanges, the dishes were fixed closer together in each corner (above right).

All 14 flanges between the bearing shelf and the pavement were treated with two rows of dishes of 小島 *Bird Free*, as shown above.

All corners where the flanges of the lateral beams meet the bearing shelf (above left), and the cross members (above right) were treated with nine dishes of 小島 *Bird Free*, as shown above, to prevent nesting.

## Testimonial

On 12 October 2015, three months after installation, Tony Ruiz, Project Manager at Road Management Services A13, commented:

“As part of our contract with the Ministry of Transport we must inspect all structures on the part of the A13 which we manage every three years. If a structure is infested with pigeons we have to clean it before we can carry out an inspection. We decided to install *Bird Free* on the flyover to eliminate the necessity for cleaning.

“So far, we are very pleased with results. Since *Bird Free* was installed all the pigeons that were living beneath the flyover have left. During a recent inspection there was no sign of any pigeons at all.”
